### **Kazeon Wins “Best Innovation Award, Small Company” Category of Information Security Decisions Best in Show Award**

**MOUNTAIN VIEW, CA-- November 12, 2007—** Kazeon Systems, Inc., a leading provider of intelligent eDiscovery solutions, today announced it has won the “Best Innovation Award, Small Company” category of the Information Security Decisions Best in Show Awards.

This year’s Information Security Decisions Excellence Awards recognized outstanding products featured at the recent Information Security Decisions conference in Chicago. Nominations were reviewed by a team of judges, which included Burton Group Security and Risk Management Strategies analysts, the editors of TechTarget's Security Media Group and security professionals attending Information Security Decisions.

Kazeon was awarded the “Best Innovation Award, Small Company” for its Kazeon Information Server product line. The Best Innovation Award recognizes products that take an interesting approach to solving a common security challenge. Nominees were judged on:

- Features of the technology
- Innovations in problem solving
- Distinguishing aspects of this product versus competing offerings

For information security & privacy and data loss prevention, the Kazeon Information Server discovers sensitive, non-public or private information contained in emails and files regardless of physical or logical location. Kazeon not only classifies email and file metadata, but also provides a comprehensive set of rules that extract common, confidential patterns such as phone numbers, social security numbers and credit card numbers. In addition, key words and phrases contained in a document (e.g. “company confidential”, “financial statement”) can be accurately identified and automated policies enable the prevention of data loss.

The Kazeon Information Server is the industry’s first product to integrate the eDiscovery functions of identification, collection, preservation, processing and

analysis of electronically stored information, which are the fundamental foundations for eDiscovery. Kazeon is also the first company to deliver intelligent eDiscovery solutions in response to litigation, information security and privacy, corporate investigations and regulatory compliance by using an Information Access technology platform.

“It is an honor for Kazeon to be recognized by end-user companies, security professionals and industry analysts as a Best in Show winner,” said Sudhakar Muddu, CEO of Kazeon. “The Kazeon Information Server uniquely uses Information Access technology to deliver an extremely flexible, scalable and cost-effective platform to solve multiple business challenges, including information security and privacy, regulatory compliance, litigation support and storage optimization.”

#### **About Kazeon**

Kazeon revolutionizes the way companies perform eDiscovery by using Information Access technology to intelligently search, classify and act on electronically stored information. Kazeon provides a full spectrum of proactive and reactive eDiscovery solutions in response to litigation, information security and privacy, corporate investigations, regulatory compliance and storage consolidation requirements. The Kazeon Information Server software automates eDiscovery functions from identification through processing and analysis. Through the development of unique indexing, tagging, and automation technology, Kazeon has established partnerships with leading companies, including BearingPoint, Fujitsu Siemens, Google, Network Appliance, Oracle and Symantec. Kazeon’s award-winning products are helping an increasing number of companies to significantly reduce the risk, duration and cost of eDiscovery matters while increasing visibility and control over electronically stored information. #### **About TechTarget**

TechTarget publishes integrated media that enable information-technology (IT) marketers to reach targeted communities of IT professionals and executives across the globe. Through its industry-leading Web sites, magazines and conferences, TechTarget delivers measurable results that help IT marketers generate qualified sales leads, shorten sales cycles and grow revenues. TechTarget’s advertisers include the leading IT companies in the world, among them, IBM, Microsoft, HP, Cisco, Oracle, Sun Microsystems, and Intel. More information about TechTarget is available at [www.techtarget.com](http://www.techtarget.com).

#### **About Burton Group**

Since 1990, Burton Group ([www.burtongroup.com](http://www.burtongroup.com)) has provided research and advisory services helping Global 2000 organizations make smart enterprise architecture decisions. Burton Group provides a suite of context-oriented analysis and a proprietary IT Reference Architecture covering security, identity management, application platforms, service-oriented architecture, network and telecom, collaboration, content management, and the data center. Uniquely focused on the need of IT buyers rather than technology providers, 85% of Burton Group’s revenue comes from end-user organizations.
