Zeh Software Resells Kazeon to create eDiscovery and Information Management solutions for Oil & Gas customers worldwide

Mountain View, Calif. --- July 15, 2008 --- Kazeon Systems, Inc., a leading provider of intelligent eDiscovery solutions, today announced a reseller partnership with Zeh Software Inc., a worldwide leader in network printing solutions, montage, and image publishing for the oil, gas, GIS and MCAD industries. Kazeon's Information Access Platform will be used by Zeh's customers to intelligently Discover, Search, Classify and take Action upon all their electronically stored information (ESI). Kazeon's technology streamlines eDiscovery tasks including early case assessment, analytics, processing and preservation of ESI – greatly reducing the overall cost and risk associated with legal discovery while helping organizations comply with corporate or governmental mandates such as the U.S. Federal Rules of Civil Procedure (FRCP) and the new Canadian National Instrument (NI) 31-103 guidelines.

FRCP requirements have forced legal professionals to shorten the time it takes to produce relevant information for eDiscovery and to identify relevant and sensitive data residing on a company's network. As a result, Zeh's customers' legal teams in the oil and gas industry worldwide are now required to sift through enormous volumes of ESI across the enterprise and across various data sources including desktops, email and PST content. Kazeon provides Zeh's customers with defensible and auditable proactive and reactive eDiscovery capabilities through Kazeon's ability to automate in-house eDiscovery functions, from collection through processing, analysis and review.

"Record prices for petroleum commodities have forced many companies to reduce costs including staffing levels," said Jerry Martin, President and CEO of Zeh Software. "Leveraging Kazeon's technology and Zeh's expertise in the oil and gas industry will automate and greatly simplify our customers' eDiscovery processes, reducing the manual tasks and burden that exists today."

"Kazeon offers the industry's most cost effective and intelligent analysis and processing eDiscovery solution and together with Zeh software we can address Information Management challenges in the oil and gas industry," said Karthik Kannan, VP of Marketing & Business Development at Kazeon. "Kazeon has a powerful set of partnerships that addresses a wide range of markets and allows us to provide a broad range of products that solves eDiscovery and Litigation Support needs, including reducing risk and case workload for attorneys and meeting information management challenges of Oil & Gas customers."

About Kazeon

Kazeon revolutionizes the way companies perform eDiscovery by using the Kazeon Information Access Platform software to intelligently discover, search, classify and act on electronically stored information. Kazeon provides a full spectrum of proactive and reactive eDiscovery solutions in response to litigation, information security and privacy, corporate investigations, regulatory compliance and storage consolidation requirements. The Kazeon Information Server software automates eDiscovery functions

from identification, collection through processing, preservation, analysis and review for corporations, service providers, and law firms. Through the development of unique search, indexing, analysis and workflow automation technology, Kazeon has established partnerships with leading companies, including Fujitsu Siemens, Google, Network Appliance, Oracle and Symantec. Kazeon's award-winning products are helping an increasing number of companies to significantly reduce the risk, duration and cost of eDiscovery matters while increasing visibility and control over electronically stored information. Kazeon provides the industry's highest scalability and performance capability of more than 17 terabytes (TB) of data per day, while offering the lowest cost, \$4.30 per Gigabyte.
